

## Tekena USA issues urgent advisory

Some customers have advised us of technical issues with imported pre-sheeted adhesive rolls which have unwrapped during operation and caused line downtime and significant damage to their elastomer rollers, to the extent that those rollers have had to be replaced at great cost. Please review the photo's below to see the results of such occurrences and the possible causes. If the adhesive sheeting process is not performed correctly and the resulting flaws not identified by any QC that the manufacturer may have in place then the likelihood of the top adhesive sheet unwrapping is greatly increased. If you have had any such experience with competitors pre-sheeted adhesive rolls please e-mail us at [technicalsupport@tekenausa.com](mailto:technicalsupport@tekenausa.com) for corrective assistance.

It has also come to our attention that such competitors may also have made false commercial statements regarding a US Patent on their pre-sheeted adhesive roll products as well as implied threats to Tekena's customers. These statements constitute actionable False Advertising, potential violations of Federal Antitrust regulations, common law unfair competition and deceptive trade practices as well as various business torts. If you or your colleagues have been informed, either verbally or in writing, by any company other than Tekena USA LLC, that they hold a US Patent on pre-sheeted adhesive rolls please contact us by e-mail at [customersupport@tekenausa.com](mailto:customersupport@tekenausa.com) or call Toll Free on 1 888 283 5635.

**Please be advised that Tekena USA LLC has a US Patent Pending on pre-sheeted adhesive rolls so please do not fall prey to overseas competitors who are trying to win business from US manufacturers by making fraudulent claims.**
